

# Hybrid General Task Heavy A/B Public Report

## Executive Summary

This public report evaluates the locked hybrid strategy on a fresh 4x3 heavy benchmark of general-purpose tasks.

The matrix is intentionally non-ACL-X-centric and measures structured task execution across all four tiers.

Release recommendation: GO.

## Benchmark Basis

Run ID: 20260413\_160451

Strategy lock: aclx-strategy-freeze-2026-04-13-t3-shell-trimmed

Generated at: 2026-04-13 16:44:52

Matrix size: 12 tasks across t0/t1/t2/t3.

Baseline failed tasks: 0.

## Aggregate Outcome

Baseline total tokens: 219253

Hybrid total tokens: 116487

Aggregate token improvement: 46.87%

Baseline total time: 1780.31s

Hybrid total time: 617.57s

Aggregate time improvement: 65.31%

Baseline average quality: 99.25

Hybrid average quality: 100.00

Quality delta: 0.75

## Tier Aggregates

| Tier | Tasks | Baseline Tokens | Hybrid Tokens | Token Improvement | Baseline Time | Hybrid Time | Time Improvement | Baseline Quality | Hybrid Quality |
|------|-------|-----------------|---------------|-------------------|---------------|-------------|------------------|------------------|----------------|
| t0   | 3     | 13407           | 15031         | -12.11%           | 69.70s        | 49.05s      | 29.62%           | 100.00           | 100.00         |

Hybrid General Task Heavy A/B Public Report

| Tier | Tasks | Baseline Tokens | Hybrid Tokens | Token Improvement | Baseline Time | Hybrid Time | Time Improvement | Baseline Quality | Hybrid Quality |
|------|-------|-----------------|---------------|-------------------|---------------|-------------|------------------|------------------|----------------|
| t1   | 3     | 145412          | 45676         | 68.59%            | 1177.31s      | 321.49s     | 72.69%           | 100.00           | 100.00         |
| t2   | 3     | 25600           | 24721         | 3.43%             | 244.64s       | 128.98s     | 47.28%           | 100.00           | 100.00         |
| t3   | 3     | 34834           | 31059         | 10.84%            | 288.66s       | 118.05s     | 59.11%           | 97.00            | 100.00         |

## Task Matrix

| Tier | Group | Task                             | Baseline Tokens | Hybrid Tokens | Token Improvement | Baseline Time | Hybrid Time | Time Improvement | Baseline Quality | Hybrid Quality |
|------|-------|----------------------------------|-----------------|---------------|-------------------|---------------|-------------|------------------|------------------|----------------|
| t0   | 1     | Store pickup brief               | 6568            | 6094          | 7.22%             | 21.22s        | 15.39s      | 27.50%           | 100              | 100            |
| t0   | 2     | Meeting capacity brief           | 3552            | 6020          | -69.48%           | 21.74s        | 20.56s      | 5.41%            | 100              | 100            |
| t0   | 3     | Field outage note brief          | 3287            | 2917          | 11.26%            | 26.74s        | 13.11s      | 50.98%           | 100              | 100            |
| t1   | 1     | Blank shipment code review       | 56541           | 11917         | 78.92%            | 328.53s       | 48.87s      | 85.12%           | 100              | 100            |
| t1   | 2     | Zero attendee review             | 52829           | 17625         | 66.64%            | 409.33s       | 110.34s     | 73.04%           | 100              | 100            |

## Interpretation and Limits

The validated claim is bounded to structured general tasks with explicit artifacts, validators, and closure conditions.

This is not a blanket guarantee for arbitrary open-ended work.

Public release evidence requires aggregate token and time advantage with no average quality regression.

## Conclusion

Within the validated benchmark scope, the locked hybrid strategy is suitable for public release.
